

```
pi@raspberrypi: /usr/share/openhab2/addons $ sudo bash zzManualInstaller.sh
```

```
!!!! This script MUST be executed by the account that runs openHAB, typically 'openhab' !!!!  
1) Continue (my openHAB account is "root")  
2) Exit  
#? 1
```

Like this script? I like BEER!!!!

<https://paypal.me/ScottRushworth>

Script version: 1.2.7

This script is capable of downloading and manually installing the latest development or snapshot builds of the Z-Wave and Zigbee bindings, and/or the openhab-core-io-transport-serial feature. The script must reside inside the addons folder and be executed on the machine running openHAB. Before a binding is installed, any previous versions will be uninstalled. Any manually installed versions will also be backed up by moving them to /addons/archive/. The installation of any binding will also include the installation of the openhab-core-io-transport-serial feature. After using this script, you can uninstall the bindings by deleting their jars from addons, or you can use this script.

```
!!!! If you have manually added the Zigbee or Z-Wave binding to your addons.cfg file, they must be removed from the file or the old version will reinstall !!!!
```

What would you like to do?

```
1) Install or upgrade Zigbee binding    5) Uninstall Zigbee binding  
2) Install or upgrade Z-Wave binding    6) Uninstall Z-Wave binding  
3) Install or upgrade both bindings     7) Uninstall both bindings  
4) Install serial transport             8) Exit  
#? 2
```

Z-Wave binding: Would you like to download the openHAB snapshot or development version?

!!!!!! DO NOT select 'Development' unless Chris has specifically instructed you to do so !!!!!

- 1) openHAB snapshot
- 2) Development
- 3) Exit

#? 1

Script version: 1.2.7

\*\*\*\*\* SUMMARY \*\*\*\*\*

Addons path: /usr/share/openhab2/addons  
openHAB account: root  
Requested action: Install or upgrade Z-Wave binding  
Current openHAB snapshot version: 2.5.5  
Requested Z-Wave version: openHAB snapshot

Is this correct?

- 1) Yes, start now
- 2) No, take me back to the first menu
- 3) Exit

#? 1

**Uninstalling any managed binding(s) and installing serial transport...**

... if prompted for a password for the Karaf console, the default password is 'habopen'...

Logging in as openhab

... a 'No matching bundles' error message is normal, if a binding had not been previously installed.

**Backing up and uninstalling any unmanaged installs of Z-Wave...**

!!!!!! It has taken more than two minutes to uninstall the Z-Wave binding, so exiting !!!!!

pi@raspberrypi: /usr/share/openhab2/addons \$
