

With binding 2.5.10 installed from inside Add-ons in PaperUI

The board is discovered and connected. It is showing status online:

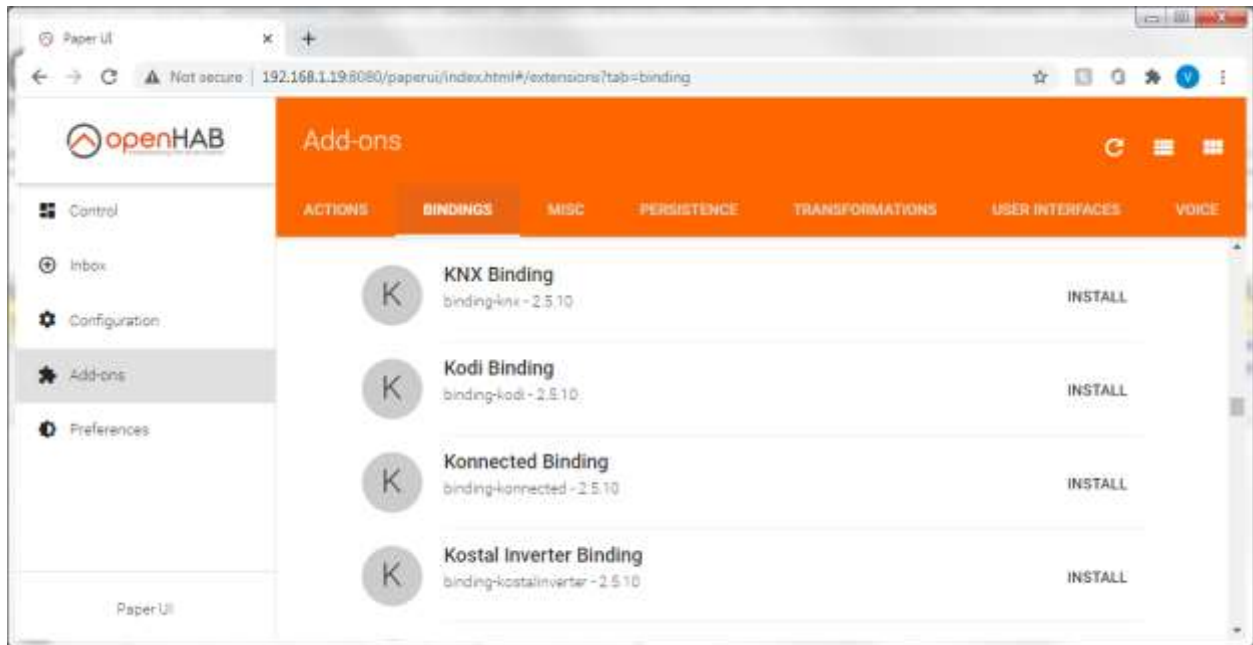

With the 2.5.10 binding it only shows 6 first channels and even they do not work when channel is toggled.

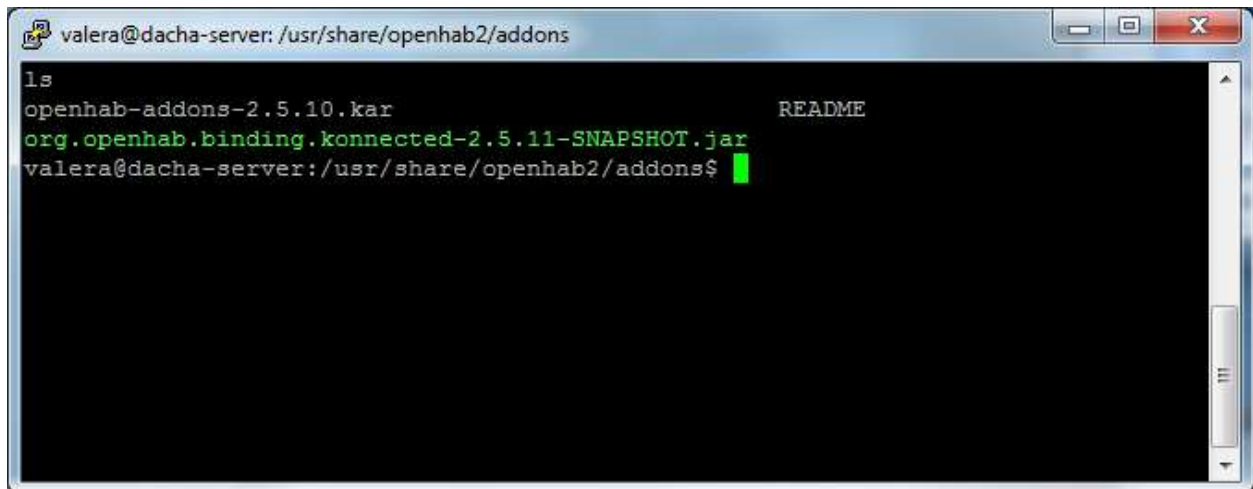

By the way I uninstalled Connected Addon before removing Connected pro thing and my server hung. I had to restart openHab to get it working again.

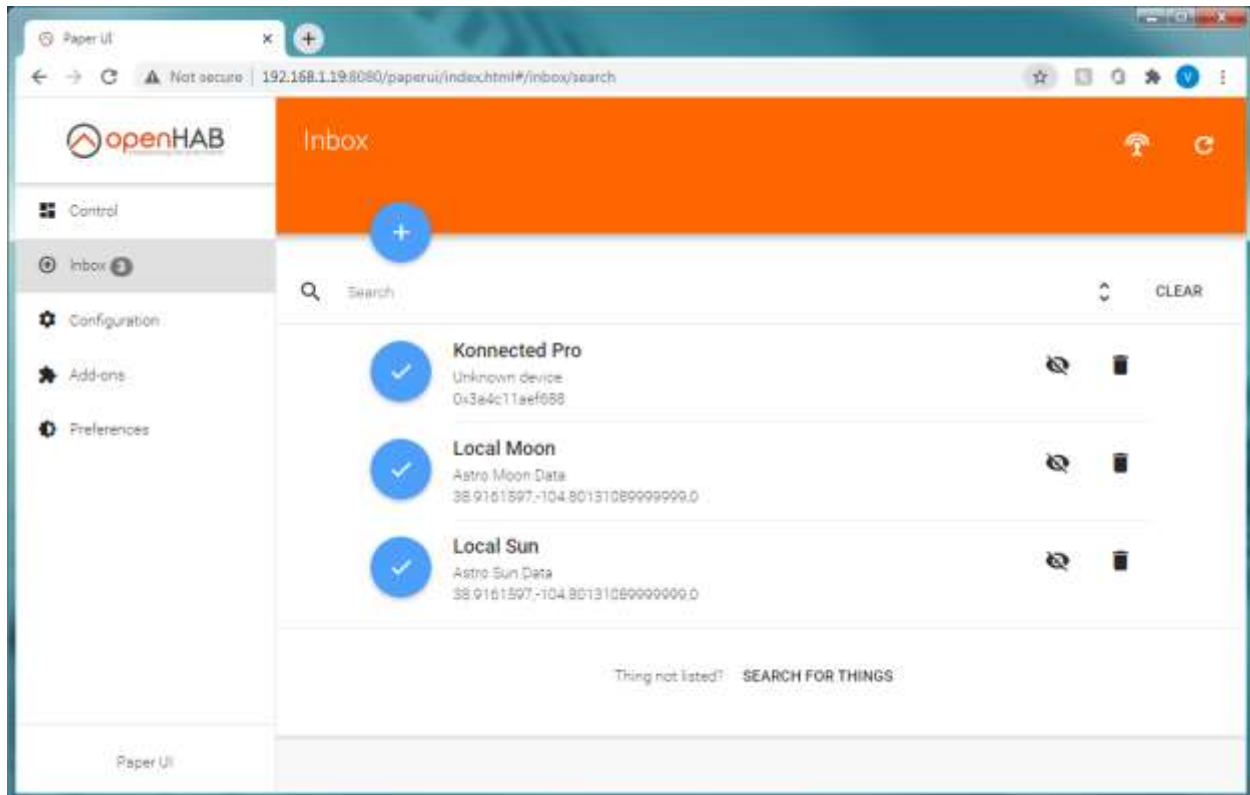

With binding 2.5.10 uninstalled in paperUI Add-ons

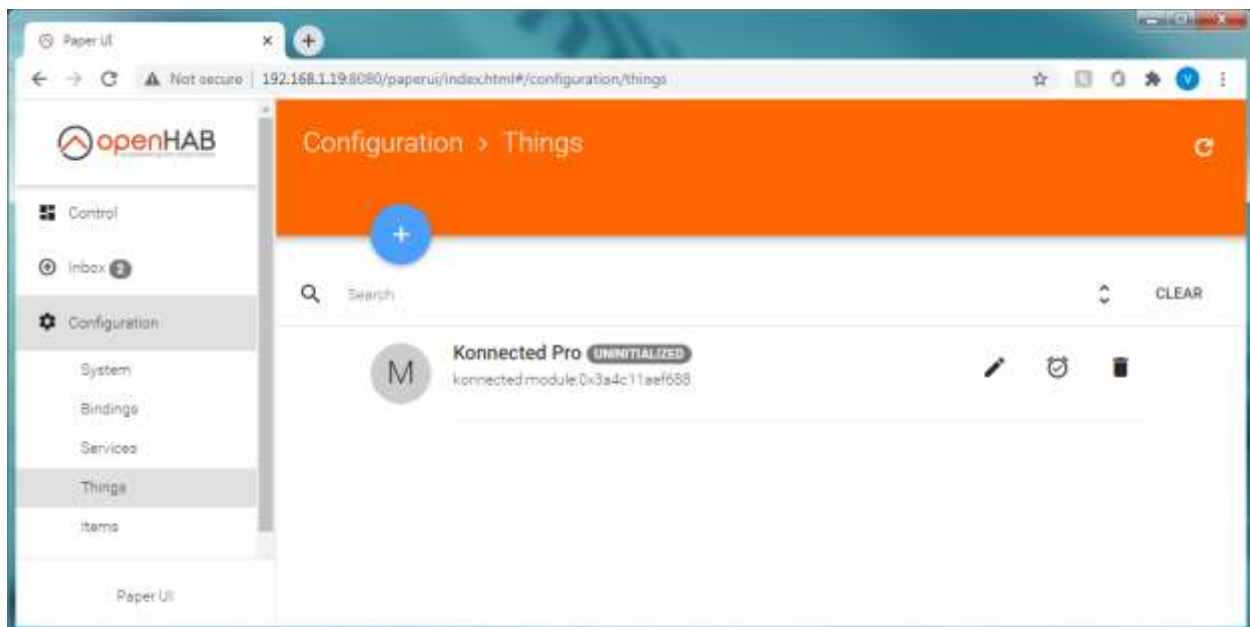

and 2.5.11 installed in addons folder like such:

The Konected Pro HW is detected:

The Konnected pro is showing in Things but not initialized:

I do see all 12 channels in the channel setup when installing it manually but there is no communication with the HW.
